

Using Internet Explorer 8

Some changes have been made by Microsoft to Internet Explorer v8 that it make it non-compatible with HTML standards. When using the latest version (v8) of Internet Explorer “Drop-Down” menus are not displayed. This is shown below on the St. Francis Xavier web page:

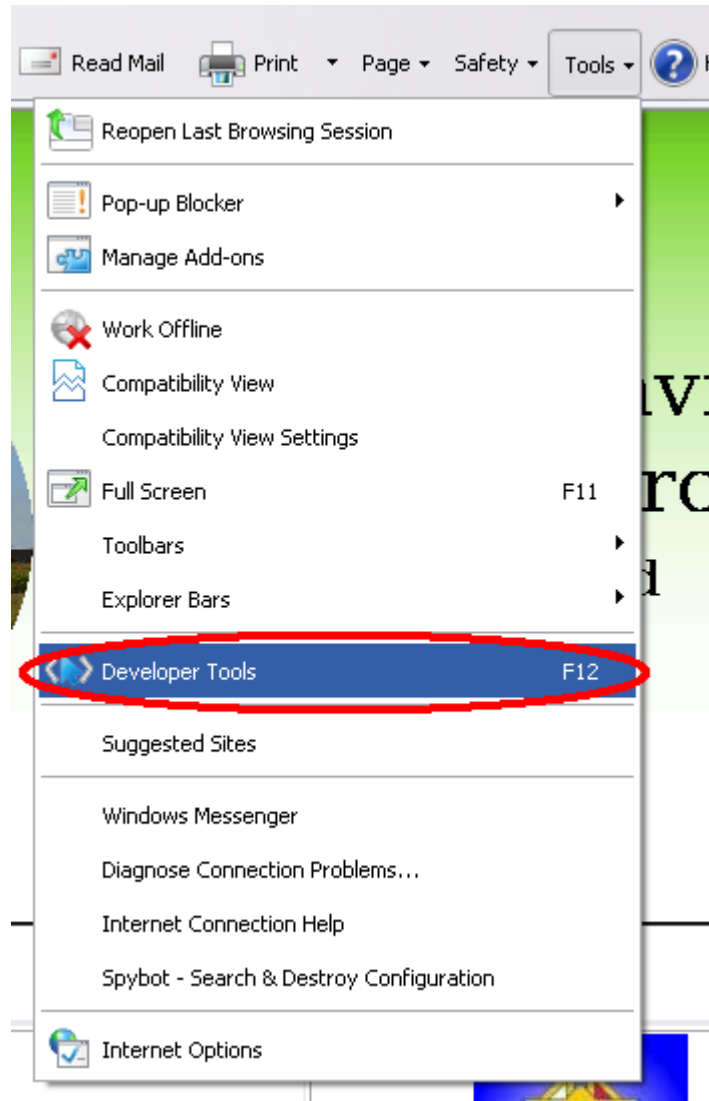

To correct this problem follow the instructions below:

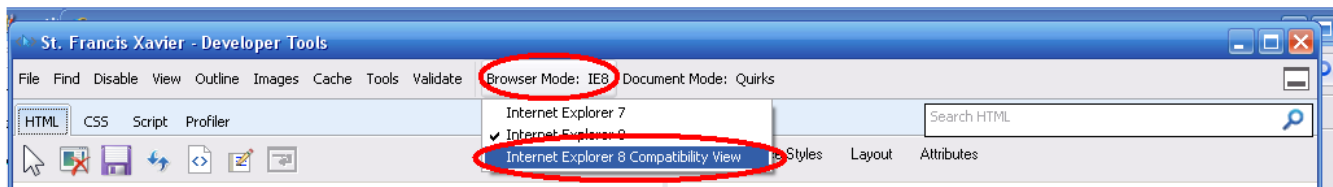

- After loading Internet Explorer find and click on the “Tools” menu

- A new menu will drop down. Select and click on “Developer Tools”.

- A new window will open. Select and click on “Browser Mode” located on the menu bar. Then from the drop-down select and click on “Internet Explorer 8 Compatible View”. This will make IE8 compatible with the Web standards.

- Close the new window and the drop-down menus should appear.
